## WHAT IS MICROSOFT AZURE?

Azure is the Microsoft's state-of-the-art Cloud Platform supported by Microsoft worldwide. MARMIND uses Microsoft Azure Germany for providing computing services (servers, storage, databases, network devices, software, analysis options and more) on the Internet ("cloud"). Current information on Microsoft Azure© is available at <https://azure.microsoft.com/de-de/>

## WHY WE CHOSE AZURE?

- Microsoft Azure Germany is the ideal cloud platform for a secure, high-performance operation of MARMIND through the data trustee T-Systems International GmbH.
- Microsoft Cloud Germany provides a separate instance of Microsoft Azure delivered from German datacenters with a dedicated network operating inside Germany. A designated German company—a German data trustee—controls access to customer data and the systems and infrastructure that hold customer data. As a result, your data is stored and managed in compliance with applicable German laws and regulations as well as key international standards. Microsoft cannot access customer data without approval from and supervision by the German data trustee or customer. See <https://azure.microsoft.com/de-de/overview/security/>
- MARMIND uses various Microsoft Azure Germany services, such as virtual machines, virtual networks, storage, cloud services and extensive backup options
- Microsoft Azure Germany supports a broad range of operating systems, programming languages, frameworks, tools, databases and devices, whereby a steady extensibility of MARMIND can be ensured
- Microsoft Azure Germany services can be up- or down-scaled on demand, depending on the actual resources MARMIND needs
- Microsoft Azure Germany houses all data in Germany and the German data trustee controls all access to customer data by anyone other than the customer.
- Microsoft was the first major cloud provider who has adopted the new international standard for data protection in the cloud, ISO 27001/18 and SSAE16/ISAE 3402 (<https://azure.microsoft.com/de-de/global-infrastructure/>)
- Microsoft Azure holds the most compliance certifications of the world's largest cloud service providers (<https://azure.microsoft.com/de-de/global-infrastructure/>)
- UPPER Network is a longtime Certified Microsoft Gold Partner and a pioneer in the development and deployment of cloud software solutions in German-speaking countries (Microsoft Partner of the Year 2011 in Austria)
